Projects

Medical Insurance Cost Prediction

The goal of this project is to give people an estimate of how much they need based on their individual health situation. With the help of end to end ML deployment and MLOPS life cycle developed and implemented a website using CI/CD pipeline. It was regression problem which gave r2 score of 85% after tuning parameters using XGBoost, Random forest classifiers.

Thyroid Disease Prediction

Developed an end to end application using Machine learning, cloud based infrastructure for healthcare domain. Worked on complete deployment process and created reports. Appliction gives realtime detection with accuracy matrics >90%
